ABOUT THIS MANUAL

Ford Motor Company salutes and applauds the towing industry for many fine years of service to the automotive industry. We will continue to work to provide our customers with guidelines.

This manual contains the latest towing procedures for 2008 Ford, Lincoln and Mercury passenger cars and light trucks. Ford Motor Company has created easy-to-follow instructions with illustrations showing the correct hook-up for damage-free towing.

As an additional safety measure, be sure to use safety chains on every tow, including wheel lift and flatbed hook-ups. This procedure will prevent losing the vehicle in the event of equipment failure or vehicle breakage at the chain attachment.

New materials and aerodynamic styling require new methods of towing to eliminate the possibility of vehicle towing damage. Wheel lifts and flatbed equipment are required to tow many vehicles. Refer to the instructions given for the specific vehicle to be towed.

FOREWORD

This manual contains information for the correct and safe towing of Ford Motor Company passenger cars and light trucks using slingbelt, wheel lift and flatbed towing equipment.

CAUTION: To help avoid personal injury and/or vehicle damage, thoroughly review the information in this manual and carefully follow all notes, cautions, warnings and procedures.

NOTE: Due to the many variations of towing equipment, specific instructions for equipment usage is not included in this manual. Refer instead to the instruction manuals supplied with the slingbelt, wheel lift or flatbed equipment.

TOWING EQUIPMENT

GENERAL TOWING INFORMATION — PASSENGER CARS

IMPORTANT SAFETY NOTICE

NOTES, CAUTIONS AND WARNINGS

As you read through the procedures, you will come across NOTES, CAUTIONS and WARNINGS. Each one is there for a specific purpose. NOTES give you added information that will help to complete a particular procedure. CAU-TIONS are given to prevent you from making an error that could damage the vehicle. WARNINGS remind you to be especially careful in those areas where carelessness can cause yourself and others personal injury.

Preparatory Steps

Release the parking brake and place transmission/transaxle in NEUTRAL. As a general rule, vehicles should be towed with the drive wheels off the ground. If the vehicle is to be towed on its drive wheels, the transmission/transaxle and differential must be operable. If the transmission/transaxle is not operable, place the drive wheels on a dolly or disconnect the rear driveshaft on rear wheel drive vehicles. DO NOT disconnect the driveshaft on Mustang; refer to the **CAUTION** in the Mustang portion of this manual. If the differential is not operable, place the drive wheels on a dolly.

When a vehicle is towed on its front wheels, the steering wheel must be clamped in the straight-ahead position with a steering wheel clamping device designed for towing service use, such as those provided by towing system manufacturers.

Do not use the vehicle's steering column lock to lock the wheels in a straight-ahead position when towed from the front or rear. If the ignition key is not available, place a dolly underneath the driving wheels of the vehicle and tow with the non-drive wheels raised.

Brake-Shift Interlock

All Ford, Lincoln and Mercury vehicles equipped with an automatic transmission/transaxle incorporate a brake-shift interlock feature that prevents the gearshift lever from being moved from PARK when the ignition is in the ON position, unless the brake pedal is depressed. If you cannot move the gearshift lever out of PARK with the ignition in the ON position and the brake pedal depressed, refer to the automatic transmission or transaxle section in the driving section of the applicable Owner's Literature.

Flatbeds

When using a flatbed to transport a vehicle, unless indicated otherwise, use T-hooks inserted in the appropriate tie-down slot. Never fasten J-hooks to any suspension wheel or driveline component because J-hooks will damage these components. When using winches, take care to avoid damaging the bumper system, lower body panels or air dams.

CAUTION: On vehicles equipped with an air suspension system, be sure the air suspension service switch is turned off prior to vehicle tie down.

CAUTION: Incorrectly tying down a disabled vehicle may damage the vehicle's suspension, driveline or body parts.

Wheel Lift

CAUTION: When towing over very rough or crowned intersection roads, the following special procedures are required when using any wheel lift equipment. The vehicle must be secured to the wheel lift equipment using safety chains equipped with T-hooks or safety hooks. If these procedures are not followed, damage to the underbody may result from excessive jounce travel of the suspension.

GENERAL TOWING INFORMATION — PASSENGER CARS

- 1. Attach the safety chain T-hooks in the appropriate slot of the body or frame of the vehicle to be towed.
- 2. Run the chain through the hooks on the wheel lift crossbar and attach it to the towing vehicle.
- 3. For all vehicles except the Taurus, Taurus X, Fusion, Milan, Focus, MKZ and Sable, make sure that there is no slack in the safety chain between the vehicle to be towed and the crossbar.
- 4. Repeat steps 1 and 2 for the other side of the vehicle.

NOTE: Check vehicles specifications for raised vehicle height requirements.

Slingbelts

Slingbelts may not be used in the towing procedure. Using a slingbelt when not indicated may cause damage to the bumper system, lower body panels, air dams or other components.

Towing Speeds

See specific model instructions for vehicle towing speed and distance limitations.

UNLTD = Unlimited speed (50 mph/80 km/h) or mileage.

On rough pavement, the maximum towing speed is 35 mph (56 km/h). Maximum towing speed of 35 mph (56 km/h) should be used whenever the tow truck operator is not sure of road surface condition.

Refer to the dolly manufacturer for speed and weight limitations.

TOWING FORD VEHICLES WITH AIR BAGS

General Information

An air bag is highly unlikely to deploy during towing. Standard towing or recovery procedures on an air bag equipped vehicle should not cause air bag deployment. Only a significant frontal or side (if equipped with side air bags) impact that closes 2 crash sensors will deploy an air bag.

How to Determine if a Ford Vehicle has Air Bags

- The fourth position of all Ford passenger car VINs is the letter:
 - "F" if equipped with active belts at all designated seating positions plus driver and passenger air bags.
 - "H" if equipped with active belts at all designated seating positions, driver and passenger air bags, plus driver and passenger side air bags, curtains or canopies.
- The steering wheel hub will also be larger and more rectangular (about 6 in x 9 in). The passenger-side air bag module trim covers will be moulded with "SRS" or "AIR BAG".
- The VIN plate may have "AIR BAG" printed on it.

Is it Necessary to Disable the Air Bag System for Towing?

• Disabling the air bag system is **not** necessary in most cases. But, as a precaution, disconnect the battery ground (-) cable in a safe manner when the vehicle has significant damage to the front of the vehicle and an undeployed air bag.

NOTE: Turning the ignition switch to OFF may **not** disable the Ford air bag system. Some older model air bag deployment systems operate independently of the ignition key position.

Towing a Vehicle with Deployed Air Bags

- Deployed air bags are **not** dangerous.
- Any powdery residue consists of corn starch or talcum powder and sodium compounds, mostly sodium carbonates (e.g., baking soda) accompanied by very minute deposits of sodium hydroxide that can be irritating to the skin and eyes but poses no long-term health hazard.

FOCUS

FRONT TOWING CONNECTIONS

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed from the front by other means or incorrectly, vehicle damage may occur.

CAUTION: When the vehicle is towed over very rough, pitching roads such as a crowned road intersection at a railroad crossing, towing speed should be greatly reduced to avoid damaging the vehicle undercarriage.

FOCUS

REAR TOWING CONNECTIONS

CAUTION: If the vehicle is to be towed from the rear using wheel lift equipment, the front wheels (drive wheels) must be placed on a dolly to prevent damage to the transaxle.

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

TOWN CAR, CROWN VICTORIA, GRAND MARQUIS

FRONT TOWING CONNECTIONS

WARNING: ON VEHICLES EQUIPPED WITH THE FIRE SUPPRESSION SYSTEM, COMPLETE ALL PRE-TOWING, UNDER-VEHICLE ACTIVITY (SECURING VEHICLE, CHAINS, STRAPS, ETC.) BEFORE TURNING THE KEY TO THE RUN POSITION. THE FIRE SUPPRESSION SYSTEM IS ACTIVE WHENEVER THE KEY IS IN THE RUN POSITION AND WILL DEPLOY IF THE MANUAL ACTIVATION BUTTON IS DEPRESSED.

CAUTION: Before the vehicle can be towed, the air suspension control switch in the luggage compartment must be turned to the OFF position (if equipped).

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: On vehicles with air suspension – if the rear air bags are deflated, load the vehicle on a flatbed and use a 4x4 board under the bed to lift the rear of the vehicle so that the rear bumper will not drag on the road surface.

AUTO without Dolly	35/56	50/80
AUTO with Dolly	UNLTD	UNLTD

TOWN CAR, CROWN VICTORIA, GRAND MARQUIS

REAR TOWING CONNECTIONS

WARNING: ON VEHICLES EQUIPPED WITH THE FIRE SUPPRESSION SYSTEM, COMPLETE ALL PRE-TOWING, UNDER-VEHICLE ACTIVITY (SECURING VEHICLE, CHAINS, STRAPS, ETC.) BEFORE TURNING THE KEY TO THE RUN POSITION. THE FIRE SUPPRESSION SYSTEM IS ACTIVE WHENEVER THE KEY IS IN THE RUN POSITION AND WILL DEPLOY IF THE MANUAL ACTIVATION BUTTON IS DEPRESSED.

CAUTION: Before the vehicle can be towed, the air suspension control switch in the luggage compartment must be turned to the OFF position (if equipped).

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: On vehicles with air suspension – if the rear air bags are deflated, load the vehicle on a flatbed and use a 4x4 board under the bed to lift the rear of the vehicle so that the rear bumper will not drag on the road surface.

MUSTANG, SHELBY GT500

FRONT AND REAR TOWING CONNECTIONS

CAUTION: Do not disconnect the driveshaft since the system is aligned and balanced.

CAUTION: Manual transmission vehicles MUST have the parking brake fully engaged when the rear wheels are on the dolly. $_{\rm integral}$

V6 COUPE AND CONVERTIBLE WHEEL LIFT TOWING

CAUTION: If the vehicle is to be towed from the front using wheel lift equipment, the front wheels must be raised to a minimum height of 18 in (46 cm) ABOVE the rear wheels to prevent damage to the vehicle undercarriage.

CAUTION: If the vehicle is to be towed from the rear using wheel lift equipment, the rear wheels must be raised to a minimum height of 14 in (36 cm) ABOVE the front wheels to prevent damage to the vehicle undercarriage.

CAUTION: If the vehicle is towed from the rear without using tow dollies for the front tires, damage to the front fascia may occur.

V8 COUPE, SHELBY GT500 AND CONVERTIBLE WHEEL LIFT TOWING

CAUTION: If the vehicle is to be towed from the front using wheel lift equipment, the front wheels must be raised to a minimum height of 16 in (41 cm) ABOVE the rear wheels to prevent damage to the vehicle undercarriage.

CAUTION: If the vehicle is towed from the front without using tow dollies for the rear tires, damage to the rear fascia may occur.

CAUTION: If the vehicle is to be towed from the rear using wheel lift equipment, the rear wheels must be raised to a minimum height of 14 in (36 cm) ABOVE the front wheels to prevent damage to the vehicle undercarriage.

CAUTION: If the vehicle is towed from the rear without using tow dollies for the front tires, damage to the front fascia may occur.

CAUTION: It is recommended that the vehicle be towed with wheel lift or flatbed equipment only. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

MANUAL	UNLTD	UNLTD

MUSTANG, SHELBY GT500

FLATBED TOWING

CAUTION: Do not disconnect the driveshaft since the system is aligned and balanced.

CAUTION: It is recommended that the vehicle be loaded onto a flatbed tow truck with the tow hook attached to a canvas strap, to prevent damage to the bottom of the front or rear bumper covers. If a strap is not available, wrap the tow cable/chain with a cloth.

CAUTION: It is recommended when using a flatbed, use mini J-hooks to tie down the front of the vehicle.

NOTE: Two rear tie-down devices should be attached with T-hooks in the shipping slots located in the rockers inward and forward of the rear wheels.

Flatbed Towing Procedure – SHELBY GT500

- Stack one long and one short 4x4 wood block per side (or other suitable ramping used to reduce the approach angle of the bed to 11.5 degrees and get the nose of the vehicle on the bed).
- Lower the carrier deck to hold ramps in place. Upper 4x4 should extend 18 in (45.72 cm) behind the carrier ramp. Lower 4x4 should extend 36 in (91 cm) behind the carrier ramp.
- 3. Attach the tow hooks.
- 4. Transport the vehicle with the parking brake OFF and the transmission in NEUTRAL.

NOTE: Two rear tie-down devices should be attached with T-hooks in the shipping slots located in the rockers inward and forward of the rear wheels.

NOTE: Inspect tie-downs periodically for tightness.

FUSION, MILAN, MKZ

FRONT TOWING CONNECTIONS

CAUTION: Use care not to damage fog lamps on vehicles, if equipped.

30€

CAUTION: It is required that the vehicle be towed with wheel lift equipment and dollies or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: If the vehicle is to be towed from the front using wheel lift equipment, it is required that the rear wheels be placed on a dolly to prevent damage to the vehicle's rear bumper or powertrain if equipped with all wheel drive (AWD).

CAUTION: If the vehicle is to be towed from the front using wheel lift equipment, the front wheels must be raised to a height of 19 in (48 cm) ABOVE the dollies to prevent damage to the vehicle undercarriage.

NOTE: Safety chains should be attached to the front corners of the subframe, then attach the chains to the tow arm.

GENERAL TOWING INFORMATION — LIGHT TRUCKS

IMPORTANT SAFETY NOTICE

NOTES, CAUTIONS AND WARNINGS

As you read through the procedures, you will come across NOTES, CAUTIONS and WARNINGS. Each one is there for a specific purpose. NOTES give you added information that will help to complete a particular procedure. CAUTIONS are given to prevent you from making an error that could damage the vehicle. WARNINGS remind you to be especially careful in those areas where carelessness can cause yourself and others personal injury.

Preparatory Steps

Release the parking brake and place the transmission/transaxle in NEUTRAL. As a general rule, vehicles should be towed with the drive wheels off the ground. If the vehicle is to be towed on its drive wheels, the transmission/transaxle and differential must be operable. If the transmission/transaxle is not operable, place the drive wheels on a dolly or disconnect the rear driveshaft (on rear wheel drive vehicles). If the differential is not operable, place the drive wheels on a dolly.

When a vehicle is towed on its front wheels, the steering wheel must be clamped in the straight-ahead position with a steering wheel clamping device designed for towing service use, such as those provided by towing system manufacturers.

Do not use the vehicle's steering column lock to lock the wheels in a straight-ahead position when pulled from the rear. If the ignition key is not available, place a dolly underneath the drive wheels of the vehicle and tow with the non-drive wheels raised.

Brake-Shift Interlock

All Ford, Lincoln and Mercury vehicles equipped with an automatic transmission/transaxle incorporate a brake-shift interlock feature that prevents the gearshift lever from being moved from PARK when the

ignition is in the ON position unless the brake pedal is depressed. If you cannot move the gearshift lever out of PARK with the ignition in the ON position and the brake pedal depressed, refer to the automatic transmission or transaxle section in the driving section of the applicable Owner's Literature.

If the brake-shift interlock feature malfunctions, it will be necessary to disable the system in order to shift the vehicle from P (PARK). Carry out the following steps.

- 1. Apply the park brake. Turn the key to the LOCK position and remove the key.
- 2. Disconnect the negative (black) battery cable from the battery.
- 3. Insert key and turn to the OFF position. Shift to N (NEUTRAL).
- 4. Reconnect the negative (black) battery cable to the battery.

WARNING: DO NOT TOW VEHICLE BACKWARD WHEN TOWING THE VEHICLE WITH ALL 4 WHEELS ON THE GROUND.

When towing the vehicle with all 4 wheels on the ground, the steering wheel should be left unlocked.

CAUTION: Incorrect towing of the vehicle could result in transmission/transaxle and/or transfer case damage. Always follow the outlined towing procedures. It is recommended that only an unloaded vehicle be towed.

IF TOWING WITH A LOAD IS UNAVOIDABLE, CARE MUST BE TAKEN TO CORRECTLY RESTRAIN LOAD FROM SHIFTING AND DISTRIB-UTE THE LOAD EVENLY IN THE PICKUP BOX.

GENERAL TOWING INFORMATION — LIGHT TRUCKS

Towing Four-Wheel Drive Vehicles with Lever-Operated Transfer Case – F-150, F-250 through F-550

- 1. Place the automatic transmission in PARK or manual transmission in 1st gear.
- 2. Place the transfer case in N (NEUTRAL).

NOTE: The transfer case NEUTRAL setting is located between 4H and 4L. In order to place the transfer case in NEUTRAL, the lever must be moved slightly to the left and rearward of the 4H position. With the ignition in the ON position, both the 4x4 and LOW RANGE indicators will be OFF when the transfer case is in NEUTRAL. If the battery is dead, jump the vehicle to make sure the lights are off.

3. On a F-Super Duty, set the manual locking hubs to the FREE position.

NOTE: To verify that the hubs are in the FREE position, the front driveshaft should turn freely.

Towing speed should not exceed 50 mph (80 km/h). This applies with either the front or rear wheels off the ground.

Towing Four-Wheel Drive Vehicles with Electronic Shift Transfer Case – F-150, F-250 through F-550, Ranger and Sport-Trac

1. Place the automatic transmission in PARK or manual transmission in 1st gear.

NOTE: With the ignition in the ON position, both the 4x4 HI and the LOW RANGE indicators will be OFF when the transfer case is in 2 HI. If the battery is dead, jump the vehicle to make sure the lights are off.

2. Set the locking hubs to the AUTO position.

NOTE: Manual locking hubs apply to F-250 through F-550 only.

Once these 2 conditions are met, follow the instructions for towing a 2 wheel drive vehicle.

WARNING: NEVER USE A TOW BAR THAT ATTACHES TO THE BUMPER WHEN TOWING THE VEHICLE. THE BUMPER COULD BE DAMAGED AND CAUSE AN ACCIDENT.

NOTE: If a distance of 50 mi (80 km) and/or a speed of 35 mph (55 km/h) is exceeded, or when the vehicle is towed with the drive wheels on the ground, either position dollies under the wheels or disconnect the driveshaft. Towing speed should not exceed 50 mph (80 km/h), when the vehicle is towed with the front wheels off the ground. Do not tow with both front and rear wheels on the ground.

Flatbeds

CAUTION: Incorrectly tying down a disabled vehicle may damage the vehicle's suspension, driveline or body parts.

Wheel Lift

CAUTION: When towing over very rough or crowned intersection roads, the following special procedures are required when using any wheel lift equipment. The vehicle must be secured to the wheel lift equipment using safety chains equipped with T-hooks. If this procedure is not followed, damage to the underbody may result from excessive jounce travel of the suspension.

- 1. Attach the safety chain T-hooks in the appropriate slot of the body or frame of the vehicle to be towed.
- 2. Run the chain through the hooks on the wheel lift crossbar and attach it to the towing vehicle.
- 3. Make sure that there is no slack in the safety chain between the vehicle to be towed and the wheel lift crossbar.
- 4. Repeat steps 1 and 2 for the other side of the vehicle.

NOTE: Check vehicles' specifications for raised vehicle height requirements.

Slingbelts/Chains/Hooks

Slingbelts may only be used when indicated in the towing procedure for a specific vehicle. When attaching slingbelts, take care to avoid damage to the license plate, fog lamps, etc., if equipped. Using a slingbelt when not indicated may cause damage to the bumper system, lower body panels or air dams.

CAUTION: Use caution when attaching tow hooks and safety chains to vehicle. Position and remove hooks with care to avoid damage to brake hoses, brake lines and steering linkage components. **NOTE:** On vehicles equipped with bumper guards, make sure the slingbelt towbar is under the bumper and the weight of the vehicle is not supported by the bumper guards.

Towing Speeds

See specific model instructions for vehicle towing speed and distance limitations.

UNLTD = Unlimited speed (50 mph/80 km/h) or mileage.

On rough pavement, the maximum towing speed is 35 mph (55 km/ h). Maximum towing speed of 35 mph (55 km/h) should be used whenever the tow truck operator is not sure of road surface conditions.

Refer to the dolly manufacturer for speed and weight limitations.

NOTE: For towing or operating conditions other than what is prescribed in this manual, the driveshaft must be removed to prevent driveline damage. Always mark the location of the driveshaft to the attaching flange before removal so the shaft can be correctly indexed upon installation. Driveshaft attachment bolts should be replaced with new OEM bolts or have thread locking compound added to the original bolts. Reinstall the driveshaft per the workshop manual.

General Information

An air bag is highly unlikely to deploy during towing. Standard towing or recovery procedures on an air bag equipped vehicle should not cause air bag deployment. Only a significant frontal impact that closes 2 crash sensors will deploy an air bag.

How to Determine if a Ford Vehicle has Air Bags

- The fourth position of all Ford light truck VINs is the letter:
 - A, N, P, R, S, T, U, V, W, X, Y or Z if equipped with driver and passenger air bags.
 - B, C, D, E, F, N or S if equipped with driver and passenger air bags, plus driver and passenger side air bags, curtains or canopies.
 - H, J, K, L or M if **not** equipped with air bags.
- The steering wheel hub will also be larger and more rectangular (about 6 in x 9 in). The passenger-side air bag module trim covers will be moulded with "SRS".

Is it Necessary to Disable the Air Bag System for Towing?

- Disabling the air bag system is **not** necessary in most cases.
- As a precaution, disconnect the battery in a safe manner when the vehicle has significant damage to the front of the vehicle and an undeployed air bag.

NOTE: Turning the ignition switch to OFF will **not** disable the Ford air bag system. The air bag deployment system operates independently of the ignition key position.

Towing a Vehicle with Deployed Air Bags

- Deployed air bags are **not** dangerous.
- Any powdery residue consists of corn starch or talcum powder and sodium compounds, mostly sodium carbonates (e.g., baking soda) accompanied by very minute deposits of sodium hydroxide that can be irritating to the skin and eyes but poses no long-term health hazard.

TAURUS X

FRONT TOWING CONNECTIONS

CAUTION: Use care not to damage fog lamps on vehicles, if equipped.

CAUTION: It is required that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: If the vehicle is to be towed from the front using wheel lift equipment, the front wheels must be raised to a height of 12 in (30 cm) ABOVE the rear wheels to prevent damage to the vehicle body.

CAUTION: If the vehicle is equipped with AWD, it is required to tow the vehicle with all wheels off the ground. Use wheel lift equipment and a dolly or a flatbed transport vehicle to prevent damage to the AWD system.

NOTE: Safety chains should be attached in the T-hook slots located on the underside of the rocker panels rearward of the front wheels.

TAURUS X

REAR TOWING CONNECTIONS

CAUTION: If the vehicle is to be towed from the rear using wheel lift equipment, it is required that the front wheels (drive wheels) be placed on a dolly to prevent damage to the transaxle and the vehicle.

CAUTION: It is required that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: If the vehicle is to be towed from the rear using wheel lift equipment, the rear wheels must be raised to a height of 12 in (30 cm) ABOVE the front wheels to prevent damage to the vehicle body.

NOTE: Safety chains should be attached in the T-hook slots located on the underside of the rocker panels forward of the rear wheels.

EDGE, MKX

FRONT TOWING CONNECTIONS

CAUTION: It is recommended that the vehicle be towed with a wheel lift and dollies or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

NOTE: On an all wheel drive (AWD) vehicle, it is required that the vehicle be towed with a wheel lift and dollies or flatbed equipment with all wheels off the ground to prevent damage to the automatic transmission, AWD systems or vehicle.

NOTE: Refer to general towing information on pages 19 through 21 before towing vehicle.

NOTE: On a front wheel drive (FWD) vehicle, it is acceptable to tow the vehicle with the rear wheels on the ground (without dollies).

NOTE: For flatbed towing, wrap loading cable with a shop towel to protect fascia from damage.

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

CAUTION: If the vehicle is equipped with air suspension, the air suspension system must be turned to off. For all vehicles except Expedition and Navigator, the control is located behind an access panel beneath the passenger side of the instrument panel.

For Expedition and Navigator Only

Disable Air Suspension (if equipped). Use the instrument cluster Message Center to disable:

- 1. With ignition in the ON position and doors closed, press the RESET button until all warnings are cleared.
- 2. Press the SETUP button until AIR SUSPENSION is displayed.
- 3. Press RESET button to cycle from OFF>ON to ON>OFF. To enable, reverse step 3.

NOTE: Refer to general towing information on pages 19 through 21 before towing vehicle.

NOTE: On a 4x4 vehicle with a lever-operated transfer case in NEUTRAL, it is acceptable to tow the vehicle with the rear wheels on the ground.

F-SUPER DUTY (F-250, F-350, F-450, F-550)

FRONT TOWING CONNECTIONS

CAUTION: It is recommended that the vehicle be towed with a wheel lift or flatbed equipment. Do not tow with a slingbelt. Ford Motor

Company has not approved a slingbelt towing procedure. If the vehicle is towed by other means or incorrectly, vehicle damage may occur.

NOTE: Refer to general towing information on pages 19 through 21 before towing vehicle.

NOTE: Crossbeam/spacer blocks must be used to keep the cable from coming in contact with the chin spoiler when loading on a flatbed. The crossbeam/spacer block can be held in place on the frame using bungee cords. Refer to Towing Equipment on page 4 for information on the crossbeam/spacer block.

NOTE: Some F-450 and F-550 vehicles may include or be equipped with aftermarket equipment. These components could be damaged using a wheel lift. Refer to the body builders information for towing instructions.

NOTE: On a 4x4 vehicle with Electronic Shift on the Fly (ESOF), it is recommended that the vehicle be towed with a wheel lift and dolly or flatbed equipment with all the wheels off the ground.

NOTE: On a 4x4 vehicle with Manual Shift on Stop (MSOS) with the transfer case in NEUTRAL, it is acceptable to tow the vehicle with the rear wheels on the ground and the transmission in PARK.

E-SERIES H2 ICE

FRONT TOWING CONNECTIONS

CAUTION: It is recommended that the vehicle be towed using wheel lift equipment only. If the vehicle is towed by any other means or incorrectly, vehicle damage may occur.

CAUTION: The driveshaft must be remove before the vehicle is towed to prevent damage to the drivetrain components. New bolts must be used when reinstalling the driveshaft.

- Attach the T-hooks to the T-hook slots in the frame just behind the front bumper, then wrap the chains under the tow bar and attach to the hooks on the front of the tow bar.
- Attach safety chains to the front axle inboard of the stabilizer bar connection.

E-SERIES H2 ICE

REAR TOWING CONNECTIONS

CAUTION: It is recommended that the vehicle be lifted using frame fork equipment only. If the vehicle is towed by any other means or incorrectly, vehicle damage may result.

- Frame lift forks must not be placed under the hydrogen tank support brackets.
- Remove all slack from the chains, then attach hooks to the inboard side of the frame just forward of the rear bumper and adjacent to the rear leaf spring hangers.
- Attach safety chains as required.

2008 FORD SERVICE INFORMATION

With our 2008 Service Information, you can repair Ford, Lincoln and Mercury Cars and Light Trucks in an expert manner and make sure of customer satisfaction. The low cost of this information is an investment in the growth of your business.

WORKSHOP MANUALS

Now available on DVD-ROM, Workshop Manuals provide complete maintenance and repair procedures. Both Car and Truck Workshop Manuals cover Body, Chassis, Electrical, Powertrain, Pre-Delivery and Emissions. Workshop Manuals are a "must" to do the job right the first time.

WIRING DIAGRAMS

Provide schematics of all electrical components and identify each wire to its correct function.

ONLINE VIEWING

Go to <u>www.motorcraft.com</u>, then click on **TECHNICAL RESOURCES** and then on **Quick Guides** to view past model year Towing Manuals.
